

Hierarchy in asana

Asana is a work management platform. Here's a concise summary of its structure and how to use each level.

Hierarchy levels (top → bottom):

- *Organization*: your company account (only for work/enterprise).
- *Workspace*: simple shared space for people/projects (used when no Organization).
- *Team*: group of people working together; owns projects.
- *Project*: container for related tasks (list, board, timeline, calendar views).
- *Section (or Column in Board view)*: groups within a project to organize tasks.
- *Task*: individual work item; can have assignee, due date, attachments, description, comments, tags, followers, subtasks.
- *Subtask*: smaller steps within a task; can be assigned/due separately and appear inside parent task.
- *Dependency*: relationship where one task blocks or depends on another (links tasks).
- *Milestone*: marker for significant points in project progress (special task type).
- *Portfolios (Business/Enterprise)*: collection of projects for high-level tracking.
- *Goals (Business/Enterprise)*: company-level objectives linked to projects/portfolios.
- *Rules/Automation*: automation applied at project or organization level to trigger actions.

Quick best practices

- ✓ Use **Teams** → **Projects** to mirror org structure or product areas.
- ✓ Keep tasks **single responsibility**; use subtasks for true child steps only.
- ✓ Use **Sections/Columns** to represent workflow stages (*Backlog, In progress, Review, Done*).
- ✓ Use **dependencies** for ordering or critical path; use **milestones** for key deadlines.
- ✓ Use **Portfolios/Goals** for executive tracking and alignment.
